Acces PDF Gelatin Coating Of Culture Plates

) Does anyone have a protocol for coating cell culture dishes with 0.1% and 2% Gelatin? Also, do you use H₂O or PBS to dissolve the gelatin? I am confused by the variation in protocols about the coating time and temperature:

Coating Dishes with Gelatin - Tissue and Cell Culture

Prepare the gelatin-coating solution by

Acces PDF Gelatin Coating Of Culture Plates

dissolving 5 g of gelatin in 1 L of heated, deionized H₂O (temperature should not exceed 45 °C). After the gelatin has dissolved, add 0.5 g of chromium potassium sulfate dodecahydrate. Chromium potassium sulfate dodecahydrate will positively charge the slides allowing them to attract negatively charged tissue sections.
