Urologic Clinics of North America | Genitourinary Trauma ...

Traumatic injuries to the genitourinary system are categorized in two forms: Blunt force trauma describes forceful impacts that occur during a fall, casual playing, or participating in a sport. On the other hand, penetrating trauma describes injuries resulting from A piercing mechanism, such as gunshot or a knife wound.

Genitourinary Trauma | Dr. Elias Wehbi

Approximately 10% of trauma patients sustain injury to the genitourinary system. The majority of these injuries (approximately 80%) are the result of a blunt trauma mechanism. Timely identification and management of genitourinary injuries can minimize the associated morbidity, which may include impairment of urinary continence and sexual function.

Genitourinary Trauma | Clinical Gate

GU injuries frequently occur in the setting of multiple organ system trauma, and although other life-threatening injuries must be addressed first, the emergency department physician must be alert to clues pointing to the presence of these injuries.

Genitourinary Trauma An Issue Of Urologic Clinics 1e The ...

The incidence of penetrating trauma is also increasing, which is seen particularly in inner city trauma centers, and is becoming a major cause of renal injury [3, 4]. A European registry of road traffic crash victims compiled between 1996 and 2001 recorded trauma to the genitourinary system in 0.46% of cases (199 of 43,056 cases) .

Imaging of Genitourinary Trauma : American Journal of ...

Blunt and penetrating abdominal trauma can cause significant injury to the genitourinary organs, and radiologic imaging plays a critical role both in diagnosing these injuries and in determining the management.

Imaging of Genitourinary Trauma : American Journal of ...

Approximately 10 percent of patients suffering injuries severe enough to require admission to a trauma service sustain injury to the genitourinary tract. The majority of these injuries (approximately 80 percent) result from blunt trauma.

UpToDate

Genitourinary trauma (GT) is the general term for injuries affecting the genitals and the various parts of the urinary system. Contact us at (888) 262-1965 to schedule an appointment.

Genitourinary Trauma | UCI Pediatric Urology

Injury to the genitourinary system is overall uncommon, with an estimated incidence of <1 percent . The upper genitourinary tract consists of the kidneys and ureters (figure 1 and figure 2). While renal injuries are more commonly due to blunt trauma, most ureteral injuries are due to penetrating trauma.

UpToDate

Abstract In up to 10% of patients who experience abdominal trauma, renal and urogenital systems will be involved. In polytrauma patients with other potentially life-threatening injuries, renal and genitourinary trauma may be overlooked initially, but a delayed or missed diagnosis of these injuries may result in preventable complications.
