Abstract. Scholars, scientists, and policymakers have hailed ecosystem-based management (EBM) as a remedy for the perceived shortcomings of the centralized, top-down, expert-driven environmental regulatory framework established in the United States in the late 1960s and early 1970s. EBM entails collaborative, landscape-scale planning and flexible, adaptive implementation.

Ecosystem-based management (EBM) is an integrated management approach that recognizes the full array of interactions within an ecosystem, including humans, rather than considering single issues, species, or ecosystem services in isolation. The current and future environmental challenges facing ocean, coastal, and Great Lakes ecosystems benefit from EBM by utilizing a broad management approach that considers cumulative impacts on marine environments; an approach that works across sectors to ...

Named EMEND - for Ecosystem-based Management Emulating Natural Disturbances - this century-long experiment is underway in northwest Alberta's boreal forest. Already, EMEND is improving our understanding of how the western boreal forest ecosystem responds to disturbances, natural ones (such as fire or pest infestation) and human ones (such as harvesting).
