This chapter focuses on
impotent men's social
relationships in two

specific contexts: with
natal families and with
women. The

phenomenon of
"imagined impotence,"

in which men who had
little sexual experience
with women

considered themselves
impotent, is examined,
suggesting that the

Erectile Dysfunction

Erectile dysfunction causes an inability among men to develop and maintain an erection. Erectile dysfunction results in unsatisfactory sexual intercourse due to disoriented ejaculatory disorders, such as, not being able to sustain an erection during intercourse or having premature ejaculation tendencies, etc.
