Twenty Lectures On Thermodynamics H

Description: Twenty Lectures on Thermodynamics is a course of lectures, parts of which the author has given various times over the last few years. The book gives the readers a bird's eye view of phenomenological and statistical thermodynamics. The book covers many areas in thermodynamics such as states and transition; adiabatic isolation; irreversibility; the first, second, third and Zeroth laws of thermodynamics; entropy and entropy law; the idea of the application of thermodynamics;

Thus, $r H^* = f H^*$ gypsum - $f H^*$ anhydrite - $f H^*$ water = -16.86 kJ/mol. ; Exothermic vs. Endothermic If $r H^* < 0$ the reaction produces a reduction in enthalpy and is exothermic (heat is given up by the rock and gained by the surroundings). If $r H^* > 0$ the reaction produces an increase in enthalpy and is endothermic (heat from the surroundings is consumed by the rock).

Chapter 20 Lecture Notes In this Chapter we return to a discussion of thermodynamics, the study of heat and energy flow. The thermodynamics that we have discussed openly were the concepts of endothermicity and exothermicity. As a start let's review the concept of endotheermic and exothermic as applied to chemical reactions.
